MKT Tools 9.3

For AccountMate SQL and LAN

MKT Tools provides powerful and time saving Data Functions and Programming Tools required by all AccountMate users, consultants and programmers.

Data Functions

Use the powerful data functions of MKT Tools to change your SQL or LAN data for your business needs. As your company grows and your clientele change, your company may need to change your GL Account Segment Definitions, Change key data fields from one value to another, or Combine data records such as customer records.

Protect your AccountMate investment by using MKT Tools powerful data maintenance tools. Use the Recover Index functions to rebuild your company and system table indexes, or use the Verify AccountMate Data Integrity to maintain the reliability and stability of your data.

- **Change GL AccountMate Segments**
  Add, Remove, Rename, Reorder, and increase or decrease the size of your GL Account Segment definitions. Segment changes are applied throughout the entire AccountMate system.
- **Change Key Values**
  Rename an individual, select list, or all GL Account ID, Bank, Customer, Employee, Inventory, Revenue, Salesperson, Vendor, or Warehouse numbers. All changes are applied throughout the entire AccountMate system. Add your own key values for additional flexibility.
- **Combine Key Values**
  Combine an individual, select list, or all GL Account ID, Customer, Inventory, Revenue, Salesperson, Vendor, or Warehouse numbers. All changes are applied throughout the entire AccountMate system. Add your own key values for additional flexibility.
- **Rebuild Table Indexes**
  Maintain your system by rebuilding your company and system indexes on a regular basis. Rebuild only the tables you choose and when you want. Set up multiple indexing schedules so that current data files are indexed on a daily basis and larger history files are recovered weekly or monthly. Works with the Microsoft Task Scheduler or any other commercially available scheduler, or use the built in scheduler for convenience. This program automatically validates your database containers and checks for and corrects table header damage.
- **Verify AccountMate Data Integrity**
  Locate data discrepancies before they become a problem by verifying your company data on a regular basis. Verify only the tables and fields you choose and when you want. Set up multiple verification schedules so that specific data is checked before critical functions such as period-end closing. Works with the Microsoft Task Scheduler or any other commercially available scheduler, or use the built in scheduler for convenience. This program provides a helpful screen that gives you not only a listing of any problems found, but suggestions on correcting the problems.

Programming Tools

Take the guesswork out of build and version upgrades. Use the programming functions of MKT Tools to report on changes with any Visual FoxPro screen form, program or database container, or changes in any AccountMate system table. Use the Database Reports to get Data Dictionary Listings, Database Object Listings, or Table Structures. Document your programming modification with MKT Tools for you and your clients.

- **Compare Screen Forms**
  Compare Visual FoxPro screen forms to determine changes made to the data environment, properties or methods of any object within the form or formset.
- **Compare Program Files**
  Compare Visual FoxPro program files (*.PRG), text files (*.TXT), header files (*.H), or Microsoft SQL Server Script files (*.SQL) to locate any changes made to the files.
- **Compare AccountMate System Tables**
  Compare AccountMate System Tables to locate any structural or data changes to the system tables.
- **Compare Database Containers**
  Compare Visual FoxPro database containers to locate any changes to the database container or the tables, views, relations, or connections contained within it.
- **Search Multiple Files**
  Locate a string of text in any screen form, report form, label form, program, text, header, or SQL Script file.
- **Database Container Data Dictionary Listing**
  Generate a data dictionary from the selected Visual FoxPro database container.
- **Database Container Object Listing**
  List all, individual, or a range of objects, tables, fields, views, relations, or connects, from a Visual FoxPro database container. Great tool for finding all tables or views that use a specific field.
- **Database Container Table/View Structures Listing**
  Generate a printed list of a table or views structure. Includes full details about the table or view, and all fields and indexes associated with the table or view. Great tool for documenting data changes performed to a clients system.

Modular Customizable Design

MKT Tools uses Plug-in components so you only need to purchase those tools that best fit your environment and needs. MKT Tools uses convenient pull down menus and offers the ability to be loaded from within AccountMate.

All data functions are customizable so that any data modifications made to you or your clients AccountMate can be recognized by MKT Tools.

MKT Tools can be modified to provide your own key values to be changed or combined in the AccountMate.
