

Tamlin Software Launches New Website, Blog *“Keep Track with Tamlin” to Focus on Key Industry Issues, Trends*

DALLAS—Jan. 25, 2016—Tamlin Software, a Dallas-based provider of ERP, traceability and accounting solutions for mid-sized food processors, discrete manufacturers and distributors, has launched a new website and blog. Both are designed to make it fast and easy to access information and resources on multiple screens, including tablet and mobile devices.

The blog, titled [Keep Track with Tamlin](#), will feature posts from Tamlin’s in-house team and other industry thought leaders on issues that are important to small- and mid-sized manufacturers. Content will include guidance and updates on a variety of topics related to Tamlin’s core areas of expertise, such as:

- Traceability
- Quality Control
- Inventory Management
- Materials Resource Planning
- Integrated Accounting
- Regulatory compliance
- And more.

“We want our new site and blog to both be go-to resources for *all* of our stakeholders,” said Linda Bryan, CEO of Tamlin Software. “The needs of mid-sized companies are often different from larger players, and it can be hard for smaller firms to find resources that directly address their own priorities. Our aim is to fill that void.”

About Tamlin Software
